

CLIFFORD 1642

AN
ALMANACK AND
PROGNOSTICATION
for the yeare of our Lord
God, 1642.

Being the second from the
Leap Yeare.

Calculated and especially re-
ferred to the Meridian of the Ci-
ty of GLOUCESTER, where the
Latitude is 51 degrees and 55 minutes,
and will serve without sensible error for
the whole Kingdome of Great Britain.

By ABRAHAM CLIFFORD Gent

*Celi enarrant gloriam Dei fortis, & opus
manuum eius indicat ex pansam eorum.
Psal. 19. versc 2.*

Printed at London by R. O. and G. D.
for the Company of Stationers

Common Notes and moveable Feasts.

According to

the English accompt } the foreigne accompt
for this yeare 1642. } for this yeare 1642.

Clifford. 1642.

A Prognostication
for the yeare of our Lord
God, 1642.

Being the second from the
Bissextile or Leap-yeare.

Containing a briefe description
of the foure quarters of this present
yeare, with the Eclipses of the Moone that
will be visible in our Horizon.

Also there are excellent Tables
to find the rising, southing and set-
ting of the Moon, Planets, and fixed
Starres, together with other briefe Rules,
Tables, and directions, pleasant and use-
full for all men of what sort soever.

By ABRAHAM CLIFFORD.

LONDON,
Printed by T.F. for the Com-
pany of STATIONERS.

A Table wherein you shall find the common notes and moveable feasts for 31 yeares to come according to the English accompt, beginning with this present yeare, 1642.

	Another great Plague in <i>London</i> .	17
	The birch of our Noble Prince <i>Charles</i> .	12
	The last great Snow.	6

A briefe description of the foure quarters of the Yeare.

Of the Spring.

THe Spring takes the beginning at the Suns entrance into the first minute of the Equinoctiall signe *Aries*, which will be this present yeare, upon the 10. day of *March*, at 11 a clock and 17 minutes in the morning, making the dayes and nights of equall length throughout the world, this quarter continueth untill the Sunne hath finished his course through these three Cœlestiall signes, *Aries*, *Taurus*, and *Gemin*.

Of Summer.

The Summer quarter, will begin when the Sunne entreth into the first minute of the Tropicall signe *Cancer*, which happeneth this yeare upon the 11 day of *June*, 57 minutes after high noone, making the longest day and shortest night to all that are on this side the *Equator*, the day then containing with us at *Gloucester*, 16 houres and 39 minutes, this quarter doth continue untill the Sunne hath passed these three signes, *Cancer*, *Leo*, and *Virgo*.

Of the Autumne.

Autumne or the Harvest quarter, begins alwayes when the Sunne entreth into the Equinoctiall signe *Libra*, which will be this yeare upon the 13 day of *September*, at 3 a clock and 51 minutes in the morning; thereby againe making the dayes and nights of equall length in all the world, the continuance of this quarter, will bee untill the Sunne hath passed through these signes, *Libra*, *scorpio*, and *sagittarius*.

A Prognostication, Of Winter.

THe Winter quarter begins this yeare upon the 11 day of *December*, at 5. a clock and 24 minutes in the afternoone, the Sun entering the first minute of the Tropicall signe *Capricorne*, at what time the Day is at the shortest and the Night at the longest, the day being with us but 7. houres and 30 min. This Winter quarter will continue so long as the Sonne is in *Capricorne*, *Aquarius*, and *Pisces*.

Of the Eclipses.

There will be 2 great Eclipses of the Moone visible in our horizon this yeare, the first Eclipse of the Moone will appeare to us on the 4 day of Aprill, the beginning of the Eclipse will be 35 min. after 11 a clock at night, totall darknes 10 min. after midnight, the middle of the Eclipse at 1 a clock and 28 min. begin to recover light at 2 and 16 min. the full end at 3 and 21 min. the 5 day in the morning, the whole continuance is 3 houres and 46 min. Eclipsed 18 digits and 35 min.

The second Eclipse of the Moone, will be scene of us the 28 day of September, the beginning is at one a clock and 40 min. in the morning, wholly darkned at 2 and 43 min. the middle 33 min. after 3, the end of the totall darknesse at 4 and 23 min. the end of the Eclipse at 5 a clock and 26 min. the whole continuance from the beginning to the end, is 3 houres and 46 min. digits eclipsed are 20 and 29 min. there will be 2 Eclipses also of the Sunn this yeare, but will not be scene of us here in England.

CLIFFORD, 1642.

Astronomical Calculations for this present year, 1642.

The true precession of the Equinoctial, or the distance of the first Starre of the Rams Horne from the Equinoctial point, according to the Rudolphine Tables is 23 deg. 11 min. and 51 seconds, but according to Lansberg it is 28 deg. 17 min. 45 seconds, and 46 thirds, the obliquity of the Zodiac according to Ticho Brahe is 23 deg. 31 min. & 30 seconds, but according to Lansberg it is 23 deg. 30 min. and 29 seconds the Eccentricity of the Sunne is 3600 parts, the Semi-diameter of the Eccentrick being 100000.

The Auges of the Planets.

According to the
Rudolphine Tables.

h 29 49 19 ♈
♃ 7 24 16 ♎
♂ 29 45 39 ♏
☉ 6 26 15 ♎
♀ 2 7 32 ♎
♂ 14 26 ♈

According to
Lansbergs Tables.

h 26 48 51 23 ♈
♃ 3 50 6 17 ♎
♂ 26 26 53 43 ♏
☉ 7 41 30 30 ♎
♀ 1 50 11 41 ♎
♂ 29 45 10 28 ♈

Saturne is retrograde from the 25 day of Iune, untill the 12 day of November.

Jupiter is retrograde from the 27 of Iune, untill the 23 of October.

Mars is retrograde the 14 day of September, untill the 19 of November.

Venus is not retrograde this yeare.

Mercury is retrograde 3 times this yeare, first, from the first day of Aprill, untill the 24 day. 2. from the 27 of Iuly, till the 19 of August, 3. from the 20 of November, untill the 12 of December.

A Prognostication,

A Table shewing the time of the Moones comming
to the Meridian or South every day this year 1641.

A

A Prognostication,

A Tide-Table.

Wherein is shewed what Moon makes a full Sea, and at what houre and min. in any of these places following.

Quinborough, Southampton, Portsmouth, Wellins,	Moon	h. m.
Ile of Wight, Beachy, The Spitts, Kē ish knock,	S. and N.	0 0
Rochester, Maldon, Aberdeen, Redban,	S. by W.	0 45
Gravesend, Dornes, Romney, Tuner, Ramking,	S. S. W.	1 30
London, Tinnmouth, Hartlepool, Whinbay,	S. W.	3 0
Bawick, Ostend, Flushing, Flamborough head,	S. W. by W.	3 45
Scarborow, Lawrenas, Mounts bay, Severne.	W. S. W.	4 30
Falmouth, Foy, Humber, New castle, Torbay		
Meonles, Dartmouth, Garnsey, S. Melawes.	W. by S.	5 15
Plimouth, Waymouth, Hull, Lin, Lundy,		
Aniwerpe, Holmes of Bristol, Davids head,	E. & W.	6 0
Bristol, Lanion, Foulnes.	E. by S.	6 45
Milford, Bridgewater, Northcoast, Exwater,	E. S. E.	7 30
Portland, Peter-port, Hareflew, Hague,	S. E. by E.	8 15
Poole, S. Helen, Manist, Carnes Flee, Embde	S. E.	9 0
Oxford, Needles, Laysto, S. & N. Forelands,	S. E. by S.	9 45
Dover, Yarmouth, Harwich, Bullin,	S. S. E.	10 30
Calice, Rye, Wenchelfey, Gorend, Thames,	S. by E.	11 15

Adding the houres and min. annexed to any of these places to the hou. and min. of the Moons coming to South, found by the precedent Table, you have the time of full Sea at that place Example, I would know at what time it will be full Sea at London Bridge the 13 day of January, first I find the Moons coming to South the same day, to be at 5 a clock and 9 min. in the morning, then I seek for London, and right against it. I find S. W. which shewes that a South west Moon makes a full tyde there, also in the 3. Column I find 3 houres, which being added to the Moons coming to South 5 houres 9 min. there will be 8 houres 9 minutes the time of full Sea at London Bridge the 13. day of January, 1642.

CLIFFORD, 1642.

The

A Prognostication.

The use of the two former Tables.

IN the first Table, and in the first Colume, are contained the names of the fixed Stars. In the second Colume, you have the right Ascension of those Stars, in houres and min. In the third Col. their Semidiurnall Arks, or halfe time of continuance above the Horizon, which being substracted from the time of the Stars comming to South, sheweth the time of the Stars rising; but being added, it shewes the time of their setting. In the fourth Col. is the declination of those Stars in deg. and min. either *North* or *South*, according to the Letters *N.* and *S.* set after them. In the 5. and last Col. you have the Magnitude of these Stars. In the second Table you have the Suns right Ascension. In the first Col. is the daies of the moneths and all the rest for the moneths according to their titles over head. By the helpe of these two Tables you may know at what houre of the day or night, any of these Stars will be on the Meridian, or due *South*; as also the houre of their rising and setting, as thus, get the Stars right Ascension in the first table; then in the second Table, get the Suns right ascension, according to the moneth, and the day of the moneth; as you shall find it to be in ho. and min. in both Tables, and note the difference of these Ascensions, then if the Stars right Ascension be more then the Suns, the difference sheweth you, how many houres and min. the Starre commeth to the *South* after the Sun, But if the Stars right Ascension be lesse then the Suns, Then the difference sheweth how many houres and

mi-

CLIFFORD, 1642.

min. the Star commeth to the *South* before the Sun,

Example, I would know the first day of *Aprill*, at what houre and min. the 7. Stars will be due *South*. now in the first table, I find the 7. Starres right Ascension to be 3. houres 26. min. and in the second Table the first day of *Aprill*, I find the Suns right Ascension 1 houre 20 min. the difference of their Ascensions is 2 houres 6 min. and because the Starres right Ascension is most, therefore the 7 Stars come to the *South*, 2 hou. 6. min. after the Sun, that is at 2 a clock and 6 min. in the afternoone.

Againe, the 3. day of *June*, the Suns right Ascension is 5 hou. 30 min. the 7 Stars right Ascension as before is 3 hou. 26 min. : the difference is 2 ho. 4 min. so much the 7 Stars commeth to *South* before the Sun. viz. at 9 a clock, and 56 min. in the morning.

Another Example, I would know at what houre and minute the same day the 7 Starres doth rise. now I seeke in the 1. Table of the fixed Stars, and in the 3. Colume I find the Semidiurnall Arke of the 7 Stars 8 houres 11. min. which I take from 9 a clock and 56 min. there remaines 1 houre 45 min. for the time of their rising.

Againe, I adde 8 houres 11 min. to 9 houres 56 min. the Sunne will be 18 houres 7 min. from which take 12, and there will remaine 6 houres 7 min. the time that the 7. Stars doth set in the afternoone the 3. day of *June*, 1642.

A Table shewing the rising of the Moone from the Full till the Change, and her setting from the change till the full: Calculated according to Longitude and Latitude for every day this year. 1642.

A Prognostication.

Here follow the places of the Planets in the Zodiack, also their Nocturnall rising, Southing, and setting, the first day of every month.

January.

☉ in 21 28 ♍ ♄ in 9 deg. ☿ ♃ in 16 deg. ♀ in 8 deg. ♀ in 24 deg. ♀ in 29 deg.

Saturne sets 18 minutes after 8 a clock at night.

Jupiter sets 2 houres 19 minutes after the Sun.

Mars riseth at 4 and 55 min. in the morning.

The morning Star riseth about the breake of day

Mercurie riseth one houre and 40 minutes before the Sun.

February.

☉ in 22 59 ♍ ♄ in 12 deg. ☿ ♃ in 24 deg. ♀ in 1 deg. ♀ in 12 deg. ♀ in 9 deg.

Saturne sets 30 min. past 6 in the evening.

Jupiter is with the Sunne.

Mars riseth 36 min. after 4 in the morning.

Venus riseth 3 quart. of an houre before the Sun.

Mercurie is not to be scene.

March.

☉ in 21 5 ♋ ♄ in 16 deg. ☿ ♃ in 1 deg. ♀ in 20 deg. ♀ in 7 deg. ♀ in 10 deg.

Saturne is neare the Sun, and Jupiter is not yet to be scene.

Mars riseth 9 min. past 4 in the morning.

Venus riseth 20 min. before the Sun.

Mercurie is not to be scene.

Aprill.

☉ in 21 39 ♋ ♄ in 20 deg. ☿ ♃ in 7 deg. ♀ in 12 deg. ♀ in 15 deg. ♀ in 7 deg.

Saturne is not yet to be scene.

Jupiter riseth a little after 4 in the morning.

Mars riseth a quarter of an houre before breake of day.

Venus is not farre from the Sunne.

Mercurie sets at 8 a clocke and 34 min. in the evening.

May,

CLIFFORD, 1642.

May.

☉ in 20 45 ♀ in 23 deg. ♄ in 13 deg. ♀ in 4 deg. ♄
 ♀ in 22 deg. ♄ in 25 deg. ♄
 Saturne riseth 44 min. after 2 in the morning.
 Iupiter riseth 2 houres before the Sunne.
 Mars a little after the breake of day.
 Venus and Mercury cannot be seene.

June.

☉ in 20 26 ♀ in 25 deg. ♄ in 16 deg. ♄ in 26 deg. ♄
 ♀ in 0 deg. ♄ in 13 deg. ♄
 Saturne and Mars rise about 3 quarters of an houre after mid-
 night, and Iupiter 20 min. before them.
 Venus and Mercurie attend upon the Sunne.

July.

☉ in 19 21 ♄ in 25 deg. ♄ in 17 deg. ♄ in 16 deg. ♄
 ♀ in 7 deg. ♄ in 8 deg. ♄
 Saturne riseth at 10 a clocke and 40 min. at night.
 Iupiter at 10 and 24 min. Mars at 11 & 22 min. after noon.
 Venus and Mercury set about an houre after the Sun.

August.

☉ in 18 38 ♄ in 24 deg. ♄ in 16 deg. ♄ in 3 deg. ♄
 ♀ in 14 deg. ♄ in 4 deg. ♄
 Saturne riseth 33 min. after 8 in the evening, and is South
 15 min. past 2 in the morning.
 Iupiter riseth about an houre after Sun-setting, and is South
 43 min. after one a clocke in the morning, Mars riseth at 9
 and 41 min. at night.
 Venus sets an houre after the Sunne.
 Mercury playes least in sight.

September.

☉ in 18 36 ♄ in 22 deg. ♄ in 11 deg. ♄ in 14 deg. ♄
 ♀ in 2 deg. ♄ in 1 deg. ♄
 Saturne is South 13 min. after midnight.
 Iupiter is South 35 min. after 1 a clocke at night.
 Mars riseth at 8 & 19 min. at night, and is South at 3 a clock.
 and 27 min. in the morning.

A Prognostication,

Venus sets an houre after the Sunne.

Mercurie riseth at 4 a clocke in the morning.

October.

☉ in 18 6 ♌ ♄ in 20 deg. ☿ ♃ in 3 deg. ☿ ♀ in 13 deg. ♋
♁ in 18 deg. ♍ ♁ in 19 deg. ♌

Saturne is South 17 min. past 10 at night, and sets 44 min. after 3 in the morning.

Jupiter is South 35 min. past 9 in the afternoone, and sets an houre before Saturne.

Mars riseth 23 min. past 6 in the evening, and is South at one a clocke and 35 min. in the morning.

Venus sets at 7 a clocke in the evening.

Mercury is with the Sunne.

November,

☉ in 19 7 ♍ ♄ in 18 deg. ☿ ♃ in 8 deg. ☿ ♀ in 3 deg. ♋
♁ in 4 deg. ♍ ♁ in 9 deg. ♌

Saturne is South at 8 a clocke and 16 min. in the afternoone, and sets 35 minutes past 1 in the morning.

Jupiter South halfe an houre after 7 in the evening, and sets 40 minutes after midnight.

Mars is South about a 11 a clocke at night, and sets at 6 in the morning.

The Evening Starre sets 40 minutes after 6 in the evening.

Mercury sets 40 minutes after the Sunne.

December.

☉ in 19 34 ♏ ♄ in 18 deg. ☿ ♃ in 10 deg. ☿ ♀ in 1 deg. ♋
♁ in 5 deg. ♍ ♁ in 16 deg. ♌

Saturne South at 6 in the evening, and sets halfe an houre after 11 at night.

Jupiter South halfe an houre past 5 in the evening, and sets 45 minutes past 10.

Mars is South 3 quarters past 8 at night, and sets 49 minutes after 3 in the morning.

The Evening Starre sets 25 minutes after 7.

Mercury is neare the Sunne.

Rules

CLIFFORD, 1642.

Rules for Husbandry:

GRaft or Plant, the Moone increasing in *Taurus*, *Capricorne*, or *Aquarius*, the winde South.

Remove young Trees, the Moone in *Aries*, *Taurus*, or *Libra*, and in the last quarter.

Prune Trees, and pill of Mofse in *January*.

Plash Hedges, Lop Trees for Fuell, the Moone increasing in *Aries*, or *Libra*.

Cut Vines in *February*, *March*, and *September*, the Moone increasing in *Aries*, *Libra*, or *Scorpio*.

Gather fruit at the full Moone, in the afternoone the weather faire and dry.

Sow all kind of Graine, the Moone increasing in *Cancer*, *Libra*, and *Aquarius*, but Seeds whose rootes be round, must be sowed three or foure dayes before or after the full.

Sheare Sheepe and cut haire to grow thicker, in *Taurus*, *Virgo*, or *Libra*, the Moone increasing.

Kill fat Swine for Bacon about the full Moone.

Destroy Cornes, Wens, and Warts in the last quarter.

Lib or geld cattell, the Moone increasing in *Aries*, *Sagitaris*, or *Capricorne*.

A Prognostication, Of the naturall Causes of Warriie Meteors, as Snow, Raine, haile, &c.

Of Raine.

RAine is a cold vapour, an Earthly humour, drawne up from the Earth and waters by vertue of the Sun into the middle Region of the Ayre, where through the extremity of cold it is thickned into the body of a Cloud, and after being dissolved, falleth upon the Earth.

Of the Rainbow.

The Rainbow is made by the Sun-beames striking upon the hallow Cloud, when their edge is repelled & beaten back against the Sunne, by the mixture of Clouds, Ayre, and fiery light together, there ariseth the variety Colours.

Of Frost and Dew.

A cold moist vapour, a little way drawne up in the day-time through the faint heate of the Sunne, presently at night it descendeth againe upon the Earth, and is called Dew, but if by means of cold it be concealed, it is called Frost.

Of Haile.

A Cloud resolved into water, freezing the drops in the fall maketh Haile, the higher it commeth, and the longer it tarrith in the Ayre the rounder it is and the lesser.

Of Snow.

Snow is a moist vapour, drawne up into the middle Region of the Ayre, then thickned and frozen into the body of a Cloud, so Congealed descendeth.

Of Winde.

Winde is nothing else but many exhalations drawne from the Earth, and inforced here and there.

Of Earthquakes.

Plenty of Windes gotten into the bowels, holes, and Caves of the Earth, the violent bursting out of them, the Earth closing againe causeth shaking or Earth-quake.

Signes

CLIFFORD, 1642.

Signes of Earthquakes.

The obscurity of the Sunne without Clouds, and strangely coloured, when waters in Wells, or Pits, be troubled, and have a bad savour, also strange noises heard, a great quietnesse of the Ayre, chiefly the long absence of Windes.

Of Thunder and Lightnings.

Thunder is an exhalation hot and dry, mixt with moisture carried up into the middle Region of the ayre, and there inclosed in a body of a Cloud, now these two contraries fire and water, being shut up together in one roome, cannot agree but fall at strife, till they have broken the prison wherein they were shut, so that the fire and water flye out of the Cloud, the breaking whereof maketh that noise which we call Thunder, and the fire is the Lightning, the Thunder is first, but the Lightning first seene, because the sight is before the hearing.

There be many sorts of Lightnings, that which is dry doth not burne, but cleave, part, or divide, that which is moist, burneth not likewise, but blasts, and altereth the colour, but that which is cleare is of a strange operation, full vessels are emptied by it, without hurt to the vessell, it melteth money in the purse, it breaketh the sword, the purse and scabard not perished, it melteth not waxe, it breaketh the bones and hurteth not the flesh, it killeth the child in the wombe, and not the mother.

*Certaine observations concerning the change
of Weather.*

Signes of faire weather.

THE Sun rising or setting cleere, clouds departing in a morning from the Sun into the West, a red evening, spots appearing in a full Moone, Batts flying busily after Sun-setting, Kites flying high in the ayre, the wreaking of waters in the morning, Ravens gaping against the Sunne, store of small flies playing in the Sun-beames towards night, all these are Signes of faire weather.

A Prognostication,

Signes of Raine.

When the Sunne presently after his rising is hid of a ~~black~~ Cloud, if at his rising hee be thinly overcast and his beames not bright and cleare, a red morning, if at his setting he be overcast with a mist, when the biggest Starres onely appeare, screaming of Peacocks, Beasts eating greedily, Swine making a noise and shaying Straw or such like stuffe, the busie heaving of Moles, Waters suddenly dried up, Bells and other noises heard a farre of Southerly, the clasping of window lids, the wallowing of Dogs, the alteration of the Cooke crowing, the sweating of stones, Earthen Vessels and such like, the dissolving of salt, the sudden departing of a Frost and overcasting of the Ayre, all these are signes of Raine and foule weather.

Signes of Winde.

The often shooting of Starres, when the Starres seeme dimme and fiery red, the working of the sky, with light streaming and running to and fro, as sodaine flashes and flames of light, if the Sunne being in a Cloud a little before his setting cast his beames a farre of and darke, also if his beames appeare before he be up, all these signifie Winde at hand.

Signes of Frosts and cold weather.

The extraordinary twinckling of the Starres, Clouds flying low, seeming to touch the tops of the Mountaines, small Birds flocking together before Winter, if it freeze the winde being Northerly with a darke lowring sky it continues long, and seldome departs without Snow, if Snow fall small at the beginning, it is a signe that it will continue long on the ground, but if in great fleakes sudden departure.

FINIS.
